- 2. Citations and explanations (Rule 70.7)
 - The newly submitted claim 1 differs from the originally submitted claim 1 in that it relates specifically to a backrest section.

US 4 084 850 A (D1), US 5 797 653 A (D2) and GB 609 242 A (D3) describe adjustment devices for adjusting backrest sections by means of an energy accumulator that absorbs mechanical energy when the backrest is adjusted in one direction and releases mechanical energy when the backrest section is adjusted in a second direction.

Consequently, claim 1 cannot be considered novel (PCT Article 33(2)).

The use of Bowden cables between the energy accumulator and the backrest section being adjusted is well known from the prior art (in particular in the automotive industry).

Consequently, claim 14 cannot be considered novel (PCT Article 33(2)).

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 3. Dependent claims 2-12 and 15-24 do not appear to contain any additional features which do not already appear in the search report citations, and which, in combination with the features of claim 1 or 14, could lead to novel and inventive subject matter.
- 4. The features in dependent claim 13 cannot be found in their present form in any of the search report citations. Should the applicant submit a new independent claim relating to a combination of claim 13 with one of the preceding claims, he should present arguments to substantiate inventive step (EPC Articles 52(1) and 56).
- 5. Contrary to PCT Rule 5.1(a)(ii), the description does not cite documents D1-D3 or indicate the relevant prior art disclosed therein.
